Last Updated Sunday, 26 August 2007

Solid timber flooring can be installed over just about any surface including concrete, bearers & joists, particleboard, and more...

- We bull-nose our stairs with strip flooring (pre-finished or raw).
- Skirting boards and beading supplied & installed. We also remove and re-fit existing skirting boards.
- Installed over concrete using plywood (preferred option) or battens (less expensive).
- Leveling work and repair work arranged and carried out.
- Insurance work welcomed.
